PROFESSIONAL SUMMARY

Full Stack Developer with experience building scalable web, mobile, and AI-powered applications using React, Next.js, Node.js, React Native, TypeScript, and Python. Developed projects ranging from RAG-based research assistants and image forensics systems to job aggregation platforms and fitness tracking applications. Active open-source contributor with merged pull requests to major repositories and a strong foundation in Data Structures Algorithms.

EDUCATION

Newton School of Technology

Bachelor of Technology (AI-ML)

Grade: 7.72/10.0

2024 – 2028

Narayana Junior College

Intermediate (Class XII)

Grade: 74.8%

2023 – 2024

PROJECTS

Aperture | [GitHub](#) | [Demo](#)

May 2026

- Fine-tuned EfficientNet-B0 on CIFAKE for AI-image detection: 98.25% accuracy, 0.9987 AUC
- Fused CNN, Error Level Analysis, copy-move detection, and EXIF anomalies via meta-classifier
- Integrated YOLOv8 object detection and CLIP zero-shot scene classification for context
- Deployed Streamlit app with Grad-CAM interpretability and 6 interactive forensic examples

PaperMind | [GitHub](#) | [Demo](#)

March 2026

- Built a RAG-based system to query research papers using PDF chunking, embedding, and semantic retrieval
- Developed embedding + similarity search pipeline to fetch top-K relevant chunks for user queries
- Integrated LLaMA 3 via Groq to generate grounded answers with source attribution

JobSync | [GitHub](#) | [Demo](#)

December 2025

- Designed backend APIs using Node.js, Express, and JWT-based authentication for secure multi-user workflows
- Structured database schema to support job tracking, status updates, and filtering
- Implemented polling-based updates for near real-time job status tracking
- Designed backend workflows to scrape and normalise job listings from platforms such as Internshala, Unstop

StepUp – Offline Fitness Tracker | [GitHub](#) | [Demo](#)

October 2025

- Built offline-first fitness tracker with React Native and AsyncStorage; zero backend dependency
- Designed schema for sets, reps, durations, and workout history persisted locally on-device
- Managed application state with Context API across workout, history, and progress views
- Implemented streak-tracking logic and analytics dashboard surfacing weekly activity trends

CERTIFICATIONS

Deloitte – Technology Job Simulation | [Link](#)

May 2026

- Implemented data transformation logic with unit tests and drafted a software development proposal for machine health

OPEN-SOURCE CONTRIBUTION

- **Hacktoberfest:** Collaborated with global maintainers on various repositories
- Improved **Shiki** CLI language inference edge cases and added tests for platform-specific file handling (#1153, #1245)
- Added unit tests to **Axios** covering nested objects, arrays, and circular references, improving helper reliability (#7272)
- Improved type safety in **React-Router** by reducing unsafe casts and removing @ts-expect-error usage (#14830)

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, CSS

Frameworks & Libraries: React, Node.js, Express JS, Next.js, React Native, FastAPI, Tailwind CSS, Prisma ORM, Scikit-learn, PyTorch, Pandas

Databases: MySQL, MongoDB

Tools & Others: Git, GitHub, GitHub Actions, Docker, Docker Compose, AWS, Postman, Hugging Face, Tableau, RAG, OAuth 2.0, UI/UX
